## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

## DETAILED ACTION

### ***Examiner Comments***

In response to applicant's submission of 8/12/2010, claims 29, 31-35, and 38-41 are pending in this application. The previous 35 U.S.C. 112, 1st paragraph rejections of claims 35 and 38-41 have been withdrawn by the office after further consideration. It is believed that the background section of the specification and the body of the specification are reasonably linked, as the background section describes the precise nature of the 'safety zone' to which the body of the specification refers while describing the structure of the system. Additionally, the 35 U.S.C. 103(a) rejections of claims 29 and 31-34 under Judd (US 4,934,937) in combination with Butler et al. (US 5,903,345) has been withdrawn. This is because there is no reason why one of ordinary skill in the art would substitute the laser system of Judd, designed for a specific combat simulation application, with the laser system of Butler, designed for surveying and leveling applications. The combat system of Judd would not properly function with the laser system of Butler. Judd requires a laser which fires intermittently in a specific directed area, simulating gunfire (See col. 3: 55-68 - the assertion in the previous office action wherein Judd provides a "laser boundary" or "sweeps a laser beam" was not a correct assessment of Judd). The laser system of Butler does not meet this requirement, as it is not an intermittent flash firing system at all, but rather establishes a continuous beam which rotates at a high speed for a range of up to 360 degrees, or sweeps through a portion thereof. There would simply be no reason why one of ordinary skill in the art would utilize this type of system in the invention of Judd, as it is not an intermittent flash fire system as required to simulate gunfire. Additionally, there is no requirement in the system of Judd for a 360 degree rotating system, nor any reasonable advantage to simply expanding the system of Judd to 360 degrees (the system of Judd represents a gunman firing in a specific area – expanding the simulation as a whole to operate in 360 degrees would be detrimental to the realism of the simulation as gunfighters do not generally fight while whirling in 360 degree circles at high speed). While Butler can be swept through areas smaller than 360 degrees, consistent with Judd, applicant's claims 29, 35, and 41 require 360 degree rotation of a constant laser beam. Even though Butler *is* capable of 360 degree rotation of a constant beam, it is not proper to

combine the combat system of Judd with the laser system of Butler, and then allege that the system of Judd/Butler teaches of 360 degree rotation of a constant laser beam – this is simply not accurate as Judd has neither requirement nor use for 360 degree rotation nor a constant laser beam. For the reasons described above, the rejections of claims 29 and 31-34 under 35 U.S.C. 103(a) based upon the combination of Judd/Butler are withdrawn.
